

**Below you will find the explanation of how to change the active carbon filter**

**What does this filter do?**

*The filter allows the constant and regular renewal of the air inside the unit and absorbs smells. It prevents them from penetrating through the cork and affecting the wines while they are being stored.*

**Do I need to change the filter often?**

*When you have received a new climate cabinet, a brand-new filter is placed inside the cabinet. We recommend changing the filter at least once a year. After +/- 9 months the carbon, which is inside the filter, is no longer working anymore.*

**The new filter comes in a plastic bag?**

*Once you received the filter and you do not want to use it immediately, please leave the filter inside the plastic bag (once you have taken it out, it will work immediately).*

**How to replace the filter?**

*You can just pull it towards yourself.*

*In case the filter is stuck, loosen it by turning or take a flat object and place it between the filter and the climate cabinet.*

**What to do with the old filter?**

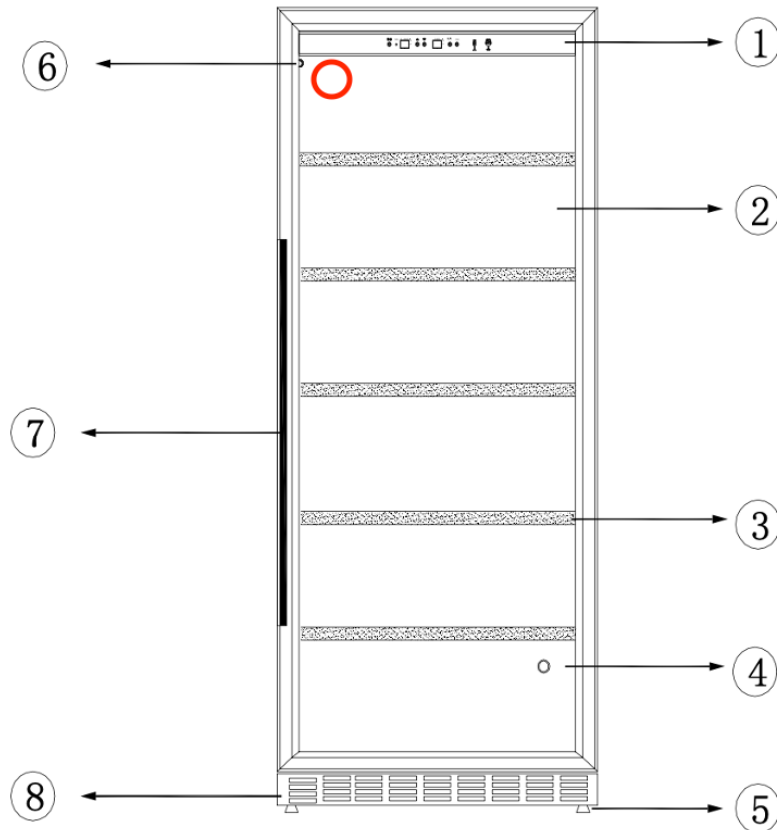

*You can simply throw it away.*

Where can I find this filter?

You can find the filter in position number 6.

Open the door and you will see that it is placed at the back of the climate cabinet (eye level on the left).

1: Control Panel

2: Glass door

3: Shelves

4: Free ventilation hole

5: Adjustable feet

6: Active charcoal filter

7: Door handle

8: Free ventilation base

We wish you a lot of pleasure with your climate cabinet.
